THERMOSALD ISX - IPX

A MODULAR SYSTEM FOR IMPULSE SEALING

NEW TECHNICAL FEATURES

THERMOREGULATOR CONFIGURABILITY
LOW VOLTAGE SUPPLY
PRECISION CALIBRATION PROBE
WORKING VOLTAGES FROM 230 TO 600 VOLTS
WORKING CURRENTS FROM 10 TO 500 AMPERE
IP65 PANEL OPTION
COPROCESSOR OPTION
PROFIBUS OPTION AND OTHER FIELD BUSES
ON-BOARD PLC OPTION WITH SEALING TIMES
MAXIMUM TEMPERATURE ALARM PROBE
CALIBRATING UP TO -30°C
RAM DATA CHECK IN RUN TIME (v4.4)

COMPLETELY AUTOMATIC CALIBRATION
ON-LINE THERMOREGULATOR SIZING
BEST DIAGNOSTICS FOR TROUBLESHOOTING
ALPHANUMERIC DISPLAY IN 6 LANGUAGES

COMPATIBILITY WITH ALL PREVIOUS MODELS

1 INTRODUCTION

This manual is the only complete document concerning the product represented on the front page. It contains safety instructions, a description of the device and some of its possible applications, instructions for installing, commissioning, servicing and disposing of the product, the codes and some examples for placing orders.

This manual is referred to in all the documents that accompany the product and must be consulted before using the product described.

In particular, read the instructions related to safety, installation, commissioning, servicing and disposal before using the product.

2 SAFETY INSTRUCTIONS AND CERTIFICATIONS

2.1 SAFETY INSTRUCTIONS

- A proper specific and technical knowledge is required to install, commission, service or use the product. Consult this "USER MANUAL" and follow the instructions contained herein in compliance with the SAFETY REGULATIONS.
- Improper use of the apparatus may result in dangerous conditions for the operator and things and people nearby.
- Do not use the equipment in an explosive atmosphere or with explosive material.
- Do not use the equipment with flammable material without first taking the necessary safety precautions.
- Install and use the thermoregulator only in industrial applications.
- Use bands or wires with an appropriate positive temperature coefficient (>= 8 x 10E-4, 800ppm/K).
- Do not change the temperature coefficient unless you have sufficient know how.
- Mechanically fix the thermoregulator to the plate using the fixing holes.
- Before connecting it to the mains, connect the ground protection conductor to the fixing bolt which is identified by a yellow-green PE indicator on the heat sink. The protection conductor must have the section >= the power conductor. We suggest to connect the ground protection conductor directly to the zinc plated plate support, nearest to the ground screw bolt.
- Do not connect the power circuit of the thermoregulator when the machine's mechanical guards are open.
- Do not power the thermoregulator if the protective cover has been removed.
- After a MASTER RESET procedure has been performed, set the parameters correctly before using the equipment.

2.2 COMPLIANCE WITH STANDARDS – CE MARKING

The device complies with the fundamental requirements set forth in the following European Directives that apply to the product with reference to the harmonized standards below:

89/336/EEC EMC Directive and subsequent amendments 92/31/ECC and 93/68/EEC

CEI EN 61000-6-4 – Electromagnetic Compatibility (EMC) –

Emission for industrial environments

CEI EN 61000-6-3 – Electromagnetic Compatibility (EMC) – Emission for residential environments

(con piattine $\leq 3 \times 0.2$ in parallelo e filtro adequato)

CEI EN 61000-6-2 – Electromagnetic Compatibility (EMC) – Part 6-2: Generic Standards - Immunity for industrial environments

73/23/EEC /LOW VOLTAGE Directive and subsequent amendments 93/68/EEC

CEI EN 60204-1 - Safety of machinery - Electrical equipment of machines

Part 1: General requirements

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

DESCRIPTION

3.1 INTRODUCTION ON THE MARKET

THERMOSALD ISX - IPX is a modular line of products that can be configured and are compatible with one another. This line has been designed to meet all demands in the IMPULSE SEALING market. THERMOSALD ISX - IPX springs from the company's long experience in the impulse sealing field and maintains total compatibility with all previous thermoregulators, namely THERMOSALD PWM, THERMOSALD SCR, THERMOSALD UPSCR and THERMOSALD ISC.

3.2 **DESCRIPTION OF THE PRODUCT AND ADVANTAGES**

Like the previous impulse thermoregulators, THERMOSALD ISX - IPX can guickly heat a sealing band or cutting/sealing wire to the set temperature without using additional probes. This technology makes it possible to obtain very high working speeds for sealing polyethylene, polypropylene, environment-friendly products and plastics in general.

The temperature is controlled directly on the sealing line and the temperature can be maintained even at high speeds. It avoids temperature drift between the first sealing operation and the next ones in production, it prevents the support bars from overheating, thus avoiding any subsequent mechanical problems caused by expansion. A cooling air blow and other precautions may further increase the speed and improve the sealing quality.

Below is a list of the most important functional-technical features of the new THERMOSALD ISX – IPX product in the following order: first the new features of this new model, than the features inherited from the previous ones.

- 24VNS insulated POWER SUPPLY: in the THERMOSALD ISX version with control on the secondary, it allows the same thermoregulator to be used regardless of the mains
- TEMPERATURE PROBE: it allows the band drift to be corrected over time
- POWER TRANSFORMER CONTROL ON THE SECONDARY OR PRIMARY: it allows the User to choose the best solution to the problem he/she has to solve within a voltage range of 230 to 600 Volts or current range of 150 to 400 Ampere.
- CONFIGURATION FREEDOM: it allows the user to choose the right model, from the less expensive one which is COMPLETELY ANALOGUE, to the most expensive and sophisticated model with COPROCESSOR and MODBUS RS485 FIELDBUS, PROFIBUS. CAN and others.
- **IP65 OPERATOR PANEL:**
- ON-BOARD PLC: it allows the thermoregulator to be used with times and internal logics for totally controlling small-sized semi-automatic sealing machines.
- COMPATIBILITY WITH ALL PREVIOUS THERMOREGULATORS: that allows spare parts to be replaced on obsolete models

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Date: 06/09/2017 Code: 3ES100_MDU_V6EN Page: 6 of: 60

- Current sensor towards ground: to stop the machine in the case of an earth leak of the band to ground and subsequent sealing malfunction.
- COMPLETELY AUTOMATIC CALIBRATION: just press the calibration button to calibrate, without selectors or trimmers
- GUIDED SIZING OF THE POWER TRANSFORMER: the only sizing required is that of the power transformer which can be done with the aid of a guided menu on the display panel: the user enters the band data and the thermoregulator suggests the voltage, current and power of the transformer to be used
- ON-LINE ANALYSIS OF THE RESISTANCE, VOLTAGE AND CURRENT VALUES OF THE BAND: the equipment allows the theoretical, commissioning and run-time values of the resistance, voltage, current and power to be displayed and compared so as to help the operator troubleshoot any machine problems
- BEST DIAGNOSTICS FOR TROUBLESHOOTING: powerful diagnostics warns the user of any problem that has occurred on the machine, from a wiring mistake during installation to a failure problem during standard operation
- ALPHANUMERIC DISPLAY IN 6 LANGUAGES

3.3 OPERATING PRINCIPLE AND ADVANTAGES:

At all network cycles THERMOSALD ISX – IPX reads the voltage and current on the band, calculates the resistance and then the temperature, which depends on the resistance, and controls the current that heats the band in a closed loop; this current is generated by a power transformer by means of phase control performed on the secondary of the power transformer in the THERMOSALD ISX configuration and on the primary of the power transformer in the THERMOSALD IPX configuration: selection can be made according to machine requirements or company situations.

The new structure of the thermoregulator allows the user to operate without virtually having voltage or current limits as the problem shifts completely on to the power transformer and the system technical standards. For further information and details please refer to paragraph CONFIGURATIONS AND ADVANTAGES below.

3.4 APPLICATIONS

On all packaging machines that require polyethylene, polypropylene, environment-friendly and plastic films to be sealed or cut/sealed, vertical and horizontal filling machines, bundling machines, shoppers, vacuum machines, etc.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21 Code: 3ES100_MDU_V6EN Page: 7 of: 60 Date: 06/09/2017

3.5 CONFIGURABILITY AND ADVANTAGES

The thermoregulator that best suits machine requirements can be built with the same basic dimensions, $120 \text{mm} \times 100 \text{mm}$.

MODEL	FEATURES	ADVANTAGES
	- completely analogue	Low cost
THERMOSALD ISX - LC (LOW COST secondary)	- control on the secondary -one model for all mains -for output currents up to 250A	- It can be used with other mains from 230V to 600V without changing the thermoregulator model
THERMOSALD IPX - LC (LOW COST primary)	- control on the primary -change of model in case of 400V mains change -for output currents up to 300A	- Very high currents for very large bands

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Code: 3ES100_MDU_V6EN Page: 10 of: 60

4 **INSTALLATION**

4.1 WARNINGS AND REQUIREMENTS FOR INSTALLATION

- BEFORE STARTING to INSTALL carefully read the SAFETY WARNINGS contained in this manual.
- This apparatus must be installed in accordance with the requirements set forth in standard CEI EN60204
- This apparatus must be installed carefully following the instructions contained in this USER MANUAL
- This apparatus must be installed by skilled and properly trained personnel

4.2 COMPONENT SELECTION AND TECHNICAL NOTES FOR INSTALLATION

(Please refer to the diagrams under paragraph 4.3)

Below are the calculations to define the voltage and current required for the best application; select the suitable THERMOSALD ISX-IPX from the order table according to the values calculated.

4.2.1 SECONDARY/PRIMARY THERMOREGULATOR

- The apparatus must be installed inside an electrical panel, protected against dust, water and corrosive acids.
- -The apparatus does not require special ventilation when used, but must be installed in a properly ventilated area; when the machine reaches steady-state operation, check that the heat sink of the thermoregulator does not exceed 60°C, if so, increase ventilation; a safety temperature probe is installed in models ISX2 and IPX2.

4.2.2 POWER TRANSFORMER AND SIZING

- A power transformer must be connected to supply power to the sealing band as indicated in the diagrams (ref. par. 4.3); in the case of a overlapped winding transformer, place a shield between the primary and secondary to avoid mains leaks on the secondary
- -The power transformer can be sized simply using the thermoregulator's panel (diagnosis menu see description in the commissioning section) or as follows: Calculate the band cross-section CROSS-SECTION[mm²] = WIDTH[mm] x THICKNESS[mm]

Calculate rated heating current Inom [A]= 30[A/ mm²] x CROSS-SECTION[mm²]

Calculate useful resistance Ru[ohm]=Specific resistance[ohm x mm² / m] x Useful length [m] / Cross-section [mm²]

Calculate the rated voltage and power

Vnom[V]= Ru[ohm] x Inom [A]. Pnom= Vnom x Inom.

Follow the suggestions of the notes below:

NOTE1: maximum theoretical voltage VT and current IT of the transformer are calculated according to the machine's speed requirements: a coefficient x 1.5, x 2, i.e. VT=Vnom x coefficient, IT=Inom x coefficient, can be applied.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Code: 3ES100_MDU_V6EN Page: 11 of: 60 Date: 06/09/2017

NOTE2: the maximum theoretical power of the transformer is calculated without considering the first full-wave heating impulses and according to a phase modulation mean factor, $PT = VT \times ITX \ 0.7$

NOTE3: the actual mean power of the transformer depends on the number of sealing operations per minute, the ratio between the active state and sealing cycle period and the thickness of the film to be sealed; due to overall dimension reasons and costs, the PT theoretical power can be declassified introducing a SIF intermittent duty-type of the transformer (which, according to experience, should be about 50%-40%).

4.2.3 SIZING THE PROTECTION DEVICES

Envisage a D CURVE protection thermal magnetic circuit breaker to disconnect the mains as indicated in the diagrams (ref. par. 4.3).

Calculate the breaking current = theoretical heating current IT divided by secondary-primary coils ratio Q.

Ithermal magnetic circuit breaker = IT / Q

NOTE1: the value of the protection device of the power transformer's secondary must be the same as or higher than the calculated theoretical current IT; this protection device trips on the cables and band downstream of it. Considering that the thermoregulator is already fitted with an electronic protection device on the cables' and band's current, the fitter should analyze the possibility of not installing said protection device on the basis of the application.

NOTE2: please note that the suggested protection devices must be verified by the designer according to the application.

4.2.4 ELECTROMECHANICAL SYSTEM

- -The safety chain must be made like the one in the base drawing (ref. par. 4.3). the emergency output contact must interrupt the power electromechanically; in particular, it must open the contactor necessary for interrupting the power transformer's power supply. this contact must be suitable for the circulating currents; this interruption is crucial because if the electronic switch inside the thermoregulator fails (very rare event), only the contactor can prevent the bands from overheating and breaking.
- Install an emergency button as indicated in the diagrams (ref. Par. 4.3). It must only be possible to reset this button manually and must be placed in a non-dangerous area that the operator can access easily.

4.2.5 MAINS FILTER

-No cases of interference with equipment nearby have occurred with THERMOSALD ISX, phase control on the secondary. The mains filter can be not mounted.

-A mains filter is recommended for THERMOSALD IPX, phase control on the primary.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Code: 3ES100_MDU_V6EN Page: 12 of: 60 Date: 06/09/2017

4.2.6 WIRING WITH BAND CONNECTION IN PARALLEL

The previous picture shows a wiring with two bands in parallel (cables 1,2,7,8): for one single band use only two cables (e.g. 1,8).

Thermoregulator

The themoregulator must be installed inside an electrical panel, screwed on a iron plate zinc plated, in vertical position.

Amperometric transformer

The amperometric transformer must be mounted inside the electric panel near the thermoregulator; cables must be twisted and must have a cross-section ≥ 0,5 mm.

Rev.: 21

Code: 3ES100_MDU_V6EN Page: 13 of: 60 Date: 06/09/2017

Power terminals on the machine

Power terminals must have screws so an optimal connection is guaranteed (do not use terminals with springs or similar) and must be positioned as near as possible to the sealing bars.

In case more thermoregulators are used, each thermoregulator must have its power terminals in an independent box: in this way the concatenation between cables of different thermoregulators can be avoided.

Sealing bars

The sealing bars are connected to the power terminals by means of power cables and, when possible, with the reference cables. In the shown diagram the reference

cables start from power terminals on the machine and not from the sealing bar to make the wiring easier: the compromise is acceptable for most applications.

The concatenation between cables connecting thermoregulator and sealing bars of different themoregulators must be avoided.

The reference between the sealing band and PE is done by means of the thermoregulator; do not connect the sealing band to PE directly.

Power cables

The power cables between the transformer and the thermoregulator, and between the thermoregulator and the power terminals on the machine must be twisted.

The paths of the cables must be as much as possible linear, short and without turns which can produce important inductive effects.

The thermoregulator passed immunity tests for heavy industrial environment; in any case it is suggested to have the paths of the cables separated from cables of other devices producing electrical noise (electrical welding devices, brushless electric drives, inverters).

It is mandatory to avoid proximity to power cables rolled up like coils because this causes a very strong electromagnetic interaction that also the use of shields cannot reduce.

Cable cross-section must be:

- 10 mm² for bands with cross-section \leq 2,0 mm² (es. 2 bands in parallel 4 x 0,25)
- 16 mm² for bands with cross-section > 2.0 mm² (es. 2 bands in parallel 6 x 0,3)

Reference cables

The reference cables must be shielded-twisted or, at least, twisted: in case shielded cable is used, the shield must be connected only to thermoregulator side; for the best wiring the reference cables should be connected directly on the terminal of one of the two bands; to increase the strength of the plant and, according to our long time experience in the most of cases, it is an optimal compromise to connect these cables to the power terminals on the machine near to the sealing bands, like shown in the above diagram.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Code: 3ES100_MDU_V6EN Page: 14 of: 60 Date: 06/09/2017

4.2.7 INSTALLATION

Electrically disconnect the electrical panel and make sure no voltage is being supplied to the mains connection terminals.

Screw the thermoregulator on the bottom of the electrical panel.

Connect the ground wire (with the same cross-section as the power cables) to the thermoregulator's PE bolt.

Wire the power cables as described previously.

Wire the reference cables as described previously.

Perform the safety chain as described previously.

PIN6	SEALING ALARM (N.C. CONTACT)	(4 A max)
PIN7	SEALING ALARM (N.C. CONTACT)	(4 A max)

CN4 – CONNECTOR FOR DISPLAY PANEL (15 POLES, FEMALE)

PIN1	+5 Vdc	Shielded (0.25 sq.mm)
PIN2	0 V	Shielded (0.25 sq.mm)
PIN3	SPI-SDO	Shielded (0.25 sq.mm)
PIN4	SPI-SCK	Shielded (0.25 sq.mm)
PIN5	SPI-SDI	Shielded (0.25 sq.mm)
PIN6		
PIN7		
PIN8		
PIN9	SPI-SS	Shielded (0.25 sq.mm)
PIN10	DO NOT USE	Shielded (0.25 sq.mm)
PIN11	DO NOT USE	Shielded (0.25 sq.mm)

Rev.: 21

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL

Code: 3ES100_MDU_V6EN Page: 25 of: 60 Date: 06/09/2017

PIN12	DO NOT USE	Shielded (0.25 sq.mm)
PIN13	DO NOT USE	Shielded (0.25 sq.mm)
PIN14		
PIN15		

NOTE1: The thermoregulator-panel connection cable must be shielded with pin-to-pin connection. Max 15 m.

CN5 - PHASE INPUT TERMINAL BLOCK FOR SYNCHRONISM

PIN1	230-480 VAC MAIN NET SYNCRONISM (10ma max)
PIN2	0 VAC (10ma max)

CN6 – REFERENCE TERMINAL BLOCK

PIN1	REF- BAND REFERENCE	(1 mA max)
PIN2	REF+ BAND REFERENCE	(1 mA max)
PIN3	REF0 REFERENCE CABLE SHIELD (do not connect on	
	the machine side)	
PIN4	CT- REFERENCE	(500 mA max) twisted
		cable
PIN5	CT+ REFERENCE	(500 mA max) twisted
		cable
PIN6	REF0 REFERENCE CABLE SHIELD (do not connect on	
	the machine side)	

CN7 - POTENTIOMETER CONNECTOR (9 POLES, MALE)

PIN1	+4.5V PREHEAT POTENTIOMETER 10Kohm	(1 mA max)
PIN2	REF+ PREHEAT POTENTIOMETER 10Kohm	(1 mA max)
PIN3	0V PREHEAT POTENTIOMETER 10Kohm	(1 mA max)
PIN4	jumper PIN3 and PIN4	(1 mA max)
PIN5		
PIN6	+4.5V SEALING POTENTIOMETER 10Kohm	(1 mA max)
PIN7	REF+ SEALING POTENTIOMETER 10Kohm	(1 mA max)
PIN8	0V SEALING POTENTIOMETER 10Kohm	(1 mA max)
PIN9	jumper PIN8 and PIN9	(1 mA max)

NOTE1: if piloted from analogue PLC output, use PIN2,PIN3,PIN7,PIN8 and leave PIN4-PIN9 free.

NOTE2: REF-, REF+: we recommend you use a shielded twisted pair (e.g. TWINAX IBM cable, our code 3esd0066)

CN8 – ANALOGUE OUTPUT TERMINAL BLOCK

PIN 1	0 Vdc ANALOGUE	(5ma max)
PIN 2	0-5 Vdc ANALOGUE REFERENCE OUTPUT	(5ma max)
PIN 3	ANALOGUE REFERENCE OUTPUT CABLE SHIELD	

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21
Code: 3ES100_MDU_V6EN Page: 26 of: 60 Date: 06/09/2017

CN9 – TEMPERATURE PROBE CONNECTOR (9 POLES, FEMALE)

PIN1	0V (3ES109B1 green wire)	(1 mA max)
PIN2	+5 Vdc (3ES109B1 brown wire)	(1 mA max)
PIN3		
PIN4		
PIN5		
PIN6		
PIN7	OUT CLOCK (3ES109B1 yellow wire)	(1 mA max)
PIN8		
PIN9	DATA (3ES109B1 white wire)	(1 mA max)

Connect 3ES109B1 screen to connector case.

CN10 - PROFIBUS / 485 SERIAL CONNECTOR (9 POLES, FEMALE)

	, ,
PIN1	
PIN2	
PIN3	Profibus B- / Rs485 A+
PIN4	Profibus Enable Output
PIN5	0V floating Output
PIN6	+5V floating Output
PIN7	
PIN8	Profibus A+ / Rs485 B-
PIN9	

NOTE1: we recommend you use a shielded cable

CN11 – CAN BUS TERMINAL BLOCK

PIN1	CAN – V-
PIN2	CAN L
PIN3	0 V EXTERNAL (INSULATED)
PIN4	CAN H
PIN5	CAN – V+

CN12 – ANPLC TERMINAL BLOCK

PIN1	0 V COMMON	
PIN2	IN0 Closed bar	(10 mA max)
PIN3	IN1	(10 mA max)
PIN4	IN2	(10 mA max)
PIN5	IN3	(10 mA max)
PIN6	IN4	(10 mA max)
PIN7	IN5	(10 mA max)
PIN8	IN6	(10 mA max)
PIN9	IN7	(10 mA max)
PIN10	24 Vdc COMMON	
PIN11	OUT0 CLOSED BAR	(0-500 ma)
PIN12	OUT1 BLOW	(0-500 ma)
PIN13	OUT2	(0-500 ma)
PIN14	OUT3	(0-500 ma)

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL

Code: 3ES100_MDU_V6EN Page: 27 of: 60 Date: 06/09/2017

5 COMMISSIONING

5.1 COMMISSIONING WARNINGS

- -BEFORE STARTING COMMISSIONING carefully read the SAFETY WARNINGS and INSTALLATION WARNINGS in the USER AND INSTALLATION MANUAL this chapter is an integral part of or a copy of it.
- -The system must have been sized as specified in the installation warnings and built in a workmanlike fashion.
- -The thermoregulator is provided in the MASTER RESET condition. After every MASTER RESET the parameters return to the default status: if they were changed for operation purposes, the working parameters are to be set; in this case 4 leds on the equipment in the right are blinking.
- -For any further information do not hesitate to contact 3E.

5.2 THERMOSALD ISX-LC – IPX-LC (LOW COST secondary - primary)

- Step 1 calibrate only after reading the commissioning warnings.
- Step 2 the machine must be at ambient temperature
- Step 3 the preheat and sealing commands must be deactivated
- Step 4 power the thermoregulator
- Step 5 in the event of an alarm, red ALARM LED on, follow the thermoregulator's suggestions and solve (the alarm number can be identified by counting the impulses of the green balance LED for tens e.g. 9 impulses = 90 + the impulses of the red balance LED for units e.g. 10 impulses = 0).
- Point 6 calibrate: press the external CALIBRATION button and wait (the 2 LEDs on the equipment blink during calibration)
- Step 7 at the end of calibration the machine is ready to work: set the preheat and sealing temperature on the preheat and sealing potentiometers (30 degrees/turn)
- NOTE 1: if calibration problems occur, perform a MASTER RESET and proceed from step 2 (to perform the MASTER RESET: keep the external RESET + CALIBRATION button pressed for 6 seconds; the 4 LEDs on the equipment remain on for 3 seconds).

NOTE 2: for analog I/O go to paragraph 5.4 ANALOGUE OPTION

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21
Code: 3ES100_MDU_V6EN Page: 28 of: 60 Date: 06/09/2017

5.3 THERMOSALD ISX – IPX (STANDARD+ MULTILANGUAGE PANEL)

- Step 1 calibrate only after reading the commissioning warnings.
- Step 2 the machine must be at ambient temperature
- Step 3 the preheat and sealing commands must be deactivated
- Step 4 power the thermoregulator
- Step 5 in the event of an alarm, thermoregulator's red ALARM LED on, follow the panel's suggestions and solve (the alarm number and the description in the language selected among the 6 possible ones)
- Point 6 calibrate: keep the green CAL button on the multilanguage panel pressed for 3 seconds (the 2 LEDs on the equipment blink during calibration).
- Step 7 at the end of calibration the machine is ready to work; set the preheat and sealing temperature in the TEMPERATURE submenu as specified in paragraph 5.5.4.
- Step 8 Press the RES button and follow the instructions to go back to the homepage
- NOTE 1: for the next calibrations press the CAL+MODE+CAL buttons on the multilanguage panel in sequence (see par. 5.5.3 Calibration Page)
- NOTE 2: calibration can also be performed from outside, as described in paragraph 5.2 of the LOW COST configuration.
- NOTE 3: if calibration problems occurs, perform a MASTER RESET according to one of the following procedures:
- procedure 1 Keep ARROW DOWN + ARROW UP on the multilanguage panel pressed for 6 seconds.
- procedure 2 Keep the external RESET + CALIBRATION buttons pressed at the same time for 6 seconds
- The 4 LEDs on the equipment remain on for 3 seconds during the MASTER RESET.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21
Code: 3ES100_MDU_V6EN Page: 29 of: 60 Date: 06/09/2017

5.4 THERMOSALD ISX – IPX (+ ANALOGUE OPTION)

NOTE 1: set the CONFIGURATION MACHINE DATA=1 potentiometers+display to enable the potentiometers.

NOTE 2: set the maximum preheat and sealing temperatures on the panel and decrease them with the analogue inputs (with 2 potentiometers 10Kohm (30 degrees/turn) or with analog plc output $(13\text{mV/degree} - 13\text{mv} \times 300^{\circ}\text{C} = 3.9\text{V}, 4.2\text{V} \text{ alarm, range 0-5V})$).

NOTE 3: please refer to paragraph 5.3 for the other functions.

NOTE 2: set the preheat and sealing temperatures with 2 potentiometers 10Kohm (30 degrees/turn) or with analogue plc outputs $(13\text{mV/degree} - 13\text{mv} \times 300^{\circ}\text{C} = 3.9\text{V}, 4.2\text{V})$ alarm, range 0-5V).

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL

Code: 3ES100_MDU_V6EN Page: 30 of: 60 Date: 06/09/2017

Rev.: 21

NOTE 4: the thermoregulators is equiped by an analog output 0-5V to output temperature in case of standard functionment, to output alarm number in case of alarm.

Case of standard functionment without power (warn33):

Alarm relay output: closed (CN3/6-CN3/7)

Analog output: 0 V

Case of standard functionment with power:

Alarm relay output: closed (CN3/6-CN3/7)

Analog output: temperature 10mv / degree (e.g. 1Volt = 100 degree)

Case of alarm (see alarm table, appendix D):

Alarm relay: open (CN3/6-CN3/7)

Analog output: 1.0 V alarm 78 – equipment not calibrated

1.5 V alarm 46 – no current signal

2.0 V alarm 48 – preheat potentiometer connections 2.0 V alarm 49 – seal potentiometer connections

2.5V alarm 69 – ground current

3.0V alarm 89 – break of 1 of 2 bands in parallel
 3.5V alarm 93 – seal command without power
 4.0V alarm 94 – reference cable interruption

4.5V alarm 97 – partial short circuit between the bands 4.5V alarm 76 – current too high-circuits in saturation

5.0V alarm non specific: see the blinking of leds green-red alarm.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Code: 3ES100_MDU_V6EN Page: 31 of: 60 Date: 06/09/2017

5.5 INSTRUCTIONS FOR USING THE MULTILANGUAGE PANEL

NOTE: It is possible to go back to the homepage from any page by pressing the RES button repeatedly.

NOTE: Press the MODE button to access the LEVEL 2 submenu pages and then the ARROW DOWN ▼ and ARROW UP ▲ buttons.

NOTE: Any parameter displayed can be changed as follows:

Press the MODE button to access the change status:

Press the ARROW UP button to change the data:

Press the MODE button to exit the change status:

"? 080"

" 081"

NOTE: Confirmation is requested before saving a change to any parameter:

????CONFIRMATION????

YES=MODE NO=RES

Answer YES to confirm, NO to reset the previous data.

5.5.1 Homepage – (WARN 33 shows that there is no power on the input terminals)

To perform a **MASTER RESET** keep the arrow up and arrow down button pressed for 6 seconds until figure 5.4.2 is displayed

To **CALIBRATE** press the **CAL + MODE + CAL** button as shown in figure 5.4.3.

For any **PARAMETER** access the submenu and search for the parameter to be changed as indicated in the table under paragraph 5.4.4.

5.5.2 Master Reset Page

Using the Master Reset procedure the thermoregulator self-configures according to the hardware installed. The parameters are initialized as factory set: if a parameter has been changed, it must be returned to the working condition.

5.5.4 PARAMETERS Pages (structure and notes of the parameters contained in the submenus)

Note: the parameters that are changed most frequently are indicated in red

TEMPERATURES	(see appendix C1)
PREHEAT TEMP.	We recommend you set it to 40° less than the sealing temp.
SEALING TEMP.	Sealing temperature
INCREASE SEALING	Increase of sealing temperature for band compensation
INCREASE NR	Number of sealing for increasing temperature
RECOVERY TIME	Time tor resetting initial temperature
BALANCE TEMPERATURE	
THEORET. CALCULATIONS	
BAND WIDTH	Theoretical value to size the machine - not required for operation.
BAND THICKNESS	Theoretical value to size the machine - not required for operation.
WIRE DIAMETER	Theoretical value to size the machine - not required for operation.
BAND LENGTH	Theoretical value to size the machine - not required for operation.
NO. IN PARALLEL	Theoretical value to size the machine - not required for operation.
NO. IN SERIES	Theoretical value to size the machine - not required for operation.
OHM for SQ.MM / M	Theoretical value to size the machine - not required for operation.
AMPERE FOR SQ.MM	Theoretical value to size the machine - not required for operation.
DUTY CYCLE	Theoretical value to size the machine - not required for operation.
TECHNICAL ANALYSIS	
IMAX	Maximum RMS current (typical data of the thermoregulator model)
I2T	Integral current per time unit
1	Heating RMS current
THEORETICAL R	Theoretical resistance of the band (resulting from theoretical calculations)
R0	Calibration Resistance
R	RunTime Resistance
THEORETICAL I	Theoretical full-wave RMS current of the band (from theoretical calculations)

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL

Code: 3ES100_MDU_V6EN Page: 33 of: 60 Date: 06/09/2017

10	Calibration full-wave RMS current
1	RunTime full-wave RMS current
THEORETICAL V	Theoretical full-wave RMS voltage of the band (from theoretical calculations)
V0	Calibration full-wave RMS voltage
V	RunTime full-wave voltage
THEORETICAL P	Theoretical full-wave power of the band Vx I x0.7(from theoretical calculations)
P0	Calibration full-wave RMS power V x I x 0.7
P	RunTime full-wave RMS power V x I x 0.7
RATING WORKING	Rating working 0-100% (100% works not in protection – best running). The
	data is updated any 10 seconds)
TEMP SENSOR ON	ON= precision sensor enabled
ACT. 1	ON= precision sensor active
TEMP	Precision Sensor Temperature
COMMANDS	
PREHEAT CMD	Manual control from the keyboard
SEALING CMD	Manual control from the keyboard
BURN IN CMD	Manual control from the keyboard
CMD IN CURRENT	Manual control from the keyboard
EMERGENCY TEST	
EMERGENCY TEST	Press the MODE button to check the emergency chain
SAVE CALIBRATION DATA	
SAVE CAL. DATA	Press the MODE button to save the data of the last calibration
CONFIGURATION MODE	
CONFIGURATION MODE	0=impulse sealing
TEMP.COEFF.(PPM)	
TEMP.COEFF.(PPM)	It is modified to adjust the thermoregulator to the material of the sealing band
CONFIGURATION	0=Impulse sealing (preset for extensions-do not change)

MAINTENANCE

6.1 REPLACING THE BAND WITH THE MACHINE COLD (i.e. bars at ambient temperature - scheduled maintenance)

- 1 Power off, remove the preheat and sealing commands, let the gripper jaws cool down.
- 2 Mount the new bands.
- 3 Power on.
- 4 Calibrate in order to compensate for any minor mechanical differences of the band (in most cases ambient temperature does not need to be changed in the setting data).
- 5 THE MACHINE is ready to work.

6.2 REPLACING THE BAND WITH THE MACHINE HOT(i.e. bars at operating temperature - quick intervention)

- 1 Power off, remove the preheat and sealing commands, let the gripper jaws cool down so the operator can work comfortably.
- 2 Mount the new bands.
- 3 Power on.
- 4 If there are no great mechanical differences in the bands THE MACHINE is ready to work.

6.3 THERMOREGULATOR MAINTENANCE

To be scheduled according to the work environment, in any case with routine maintenance intervals should be no longer than 180 days.

- 1 Make sure the connection terminals are properly screwed.
- 2 Periodically check correct operation of the output safety alarm contact (press the mode button as requested at start-up to check the alarm circuit: the emergency output relay must open and the power circuit must remain disconnected).

6.4 **GRIPPER JAWS MAINTENANCE**

To be scheduled according to the work environment at periodic intervals.

- 1 Make sure the feedback reference terminals and power terminals are properly screwed.
- 2 Make sure the band's terminals are highly conductive and do not show any oxidation or bad contacts: if so, service them accurately.
- 3 Check the band's supports in insulating material and Teflon.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21 Date: 06/09/2017

7 TECHNICAL DATA

7.1 TECHNICAL DATA FOR THE MODULATION-ON-THE-SECONDARY MODEL

CONTROL POWER SUPPLY (CN2)	24VDC +/- 20% (max absorption: 0.2 A)
POWER SUPPLY	SECONDARY POWER TRANSFORMER
STANDARD MODEL	10V-70V (seal bands 20cm-200cm)
LOW VOLTAGE MODEL	5V-10V (seal bands < 20cm)
HIGH VOLTAGE MODEL	70V-140V (seal bands > 70cm)
60A MODEL	For a total band cross-section <= 2sq.mm
90A MODEL	For a total band cross-section > 2sq.mm
SHORT CIRCUIT CURRENT	180A(mod.60)
	400A(mod.90)
I2T STANDARD - I2T MAX CURRENT	150-180A(mod.60) 260-300A(mod.90)
MAINS FREQUENCY	50 – 60 Hz automatic switchover
DIGITAL COMMANDS	24 VDC (max absorption: 20 ma)
SEALING ALARM CONTACT	250 V 1 A (2A MAX)
STANDARD RESOLUTION	0.3 degree
REPETITIVENESS	≅ +/- 1°C
PRECISION	Depend of the thermic drift of sealing band
PREHEATING TEMPERATURE	Can be set on the display panel 0-300°C
SEALING TEMPERATURE	Can be set on the display pannel 0-300°C
SEALING AND COOLING-DOWN TIME	External by PLC
WORKING ENVIRONMENT TEMPER.	-20°C + 40°C
WORKING ENVIRONMENT HUMIDITY	<50%
THERMOREGULATOR PROTECTION	IP20
RATING	
PANNEL PROTECTION RATING	IP44 (IP65 WITH OPTION)
POWER UNIT WEIGHT	kg 1.6

7.2 TECHNICAL DATA FOR THE MODULATION ON THE PRIMARY MODEL

CONTROL POWER SUPPLY (CN2)	24VDC +/- 20% (max absorption: 0.2 A)
POWER SUPPLY	230-480VAC
STANDARD MODEL	10V-80V (seal bands 20cm-200cm)
LOW VOLTAGE MODEL	5V-10V (seal bands < 20cm)
HIGH VOLTAGE MODEL	70V-140V (seal bands > 70cm)
SHORT CIRCUIT CURRENT	400 Ampere
I2T STANDARD - I2T MAX CURRENT	300-400A
MAINS FREQUENCY	50 – 60 Hz automatic switchover
DIGITAL COMMANDS	24 VDC (max absorption: 20 ma)
SEALING ALARM CONTACT	250 V 1 A (2A MAX)
REPETITIVENESS	≅ +/- 1°C
PREHEATING TEMPERATURE	Can be set on the display pannel 0-300°C
SEALING TEMPERATURE	Can be set on the display pannel 0-300°C
SEALING AND COOLING-DOWN TIME	External by PLC
WORKING ENVIRONMENT TEMPERAT.	-20°C + 40°C
WORKING ENVIRONMENT HUMIDITY	<50%
THERMOREGULATOR PROTECTION	IP20
RATING	
PANNEL PROTECTION RATING	IP44 (IP65 WITH OPTION)
POWER UNIT WEIGHT	kg 1.6

8.1.9 Power transformer

For the sizing of the power transformer suitable for your application contact 3E technical support.

8.1.10 Consumable

Bands, belts and sealing wires with different profiles, in meters, specifically designed, copper-plated, teflon-coated are available.

Teflon and insulators with different profiles, in meters, specifically designed are available too.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL RODGE: 3ES100_MDU_V6EN Page: 42 of: 60

8.1.11 Manuals for all models

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21
Code: 3ES100_MDU_V6EN Page: 43 of: 60 Date: 06/09/2017

APPENDIX A - SEALING CYCLE

NOTE - The sealing cycle suggested is given by way of example only and is not to be considered as a binding usage diagram. Experience shows that the timing must be changed according to the specific application, i.e. of the materials, dimensions, times, etc. For further information please contact our technical department.

WELDING CYCLE

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Code: 3ES100_MDU_V6EN Page: 44 of: 60

APPENDIX B - MACHINE DATA LIST

NOTE – The machine data must be changed only by skilled and qualified personnel after contacting our technical department

TO ACCESS: press the MODE button on the MACHINE DATA submenu

TO EXIT: press the RES button

RATED I = 60 / 90 / 120 (AMPERE)

Cannot be changed, it shows the rated current of the model used

HEATING RAMP = (U.M. = degrees/100ms, default = 40)

Temperature increase rate following a preheat or sealing command [U.M.: degrees/100 ms].

Increasing this parameter means decreasing the time required to bring the band to the proper temperature, subsequently increasing speed, reducing stability, decreasing band life.

PROPORTIONAL GAIN KV = (U.M., default = 100)

Proportional loop gain. Increasing this parameter means increasing the loop reply speed and therefore making the system more ready.

Increasing it too much may result in system instability and subsequently in temperature oscillation.

INTEGRAL GAIN KI = (U.M., default = 40)

Integral loop gain. Increasing this parameter means increasing temperature accuracy and the speed for achieving the temperature desired. Increase this parameter to increase system stability.

Increasing it too much may result in a temperature overflow subsquent to a preheat or sealing command.

INTEGRAL THRESHOLD LIMIT FI= (default = 60%) (soft.v4.4)

It limits the maximum value of the integrative component in heat zone: increasing this value it increases the hot overshoot (contact our technical office)

INTEGRAL THRESHOLD LIMIT IN= (default = 0%) (soft.v4.4)

It limits the maximum value of the integrative component in cold zone: increasing this value it increases the speed of heating (contact our technical office)

INTEGRAL THRESHOLD LIMIT FS= (default = 80%) (soft.v4.4)

It limits the maximum value of the integrative component in production: increasing this value it increases the temperature of the bar in production (contact our technical office)

DERIVATIVE GAIN KD = (U.M., default = 30)

Derivative loop gain. Increasing this parameter means increasing the loop reply speed and therefore making the system more ready to changes.

Increasing it too much may result in system instability and subsequently in temperature oscillation.

READ DELAY = (default = 1200usec.) (soft.v4.4)

It can modify the time of reading the analog converter; modifying this parameter help to improve the performance of the thermoregulator when an undersize power transformer is used(contact our technical office)

PARTIAL SHORT CIRCUIT FACTOR = (U.M., default = 1.2)

It allows an instantaneous current threshold to be established, due to a partial short circuit, above which the thermoregulator goes in alarm condition F097.

ALARM DISABLING1 = 0 (U.M.)

It allows any alarm to be disabled. To be used carefully. In certain cases it may allow the production cycle to restart. Alarm disabling must be considered temporary and actions must be taken immediately to remove its causes.

ALARM DISABLING2 = 0 (U.M.)

It allows any alarm to be disabled. To be used carefully. In certain cases it may allow the production cycle to restart. Alarm disabling must be considered provisional and actions must be taken immediately to remove its causes.

DISPLAY CONFIGURATION = 2

1=operation with potentiometers: the temperature set on the display can be limited by the analogue input. 2=operation with display only or FIELD BUS

PLC OPTION (default = OFF)

It is put to ON when the PLC card is plugged in, for managing sealing gripper jaw movement and sealing times

TEMPERATURE SENSOR ENABLING (ON/OFF)

It is automatically acquired during the MASTER RESET

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Code: 3ES100_MDU_V6EN Page: 45 of: 60 Date: 06/09/2017

PASSWORD ENABLING = 0

1=partial password; 2=total password

KEY PASSWORD (default = 0000)

Another password can be entered to block the data

<u>APPENDIX B1 – PRIORITY MACHINE DATA managed directly on the MAIN MENU</u> (see par.5.5.4 parameters pages)

BALANCE TEMPERATURE (default = 30)

It can be changed according to the ambient temperature during calibration; with the PRECISION SENSOR option this parameter is changed automatically at the end of a calibration procedure

TEMPERATURE COEFFICIENT (ppm – parts per million, default =1210)

It allows the thermoregulator to be adjusted to the type of band used. See safety standards in this manual. The value required is to be set again after a MASTER RESET.

CONFIGURATION MODE (default =0)

0=standard impulse sealing: control loop much reliable, fits perfectly to the machine conditions.

MAX Sealing TEMPERATURE (default = 250)

It can be changed according to the maximum temperature allowed. The value required is to be set again after a MASTER RESET.

I2T for 1 SECOND (default = 200 Ampere)

It can be decreased according to the protection rating desired on the machine

APPENDIX C - SETTING DATA LIST

NOTE – The machine data must be changed only by skilled and qualified personnel after contacting our technical department.

TO ACCESS: press the MODE button on the SETTING DATA submenu

TO EXIT: press the RES button

LANGUAGE SELECTION (default=ITALIANO)

It is possible to select up to 6 languages: ITALIAN, ENGLISH, FRENCH, GERMAN, SPANISH, TO BE DEFINED

DISPLAY DEGREES (default=CENTIGRADE)

It allows the user to select whether the temperature is to be displayed in Celsius or Fahrenheit degrees.

MAXIMUM SEALING TIME (SECONDS, default = 0.0)

Sealing time check. It allows the maximum time of the sealing command to be set. If the sealing command lasts longer than this value, the thermoregulator goes in alarm condition F085.

For applications with a sealing command that is always high, this parameter must be set to 0.

TEMPERATURE GRADIENT FOR BALANCE (DEGREES/10 SECONDS, default = 4)

It shows the maximum temperature cooling down speed expressed in degrees/10 seconds above which the balance is not enabled and warning 38 appears. Increasing this parameter may result in a loss of accuracy.

BAND TO GROUND (default = 20%); It can be changed

Soft V3.0(ground current=1000ma), Soft V3.1(1000ma), Soft V3.2(1000ma), Soft V3.3(20%)

WARN TIME = (SECONDS, default = 3)

In the case of warning the thermoregulator signals the failure without going to an alarm condition and stopping. The message is displayed for the seconds specified by this parameter. If this parameter = 0 the message is not displayed, if this parameter is maximum value = 10 the message is dispayed till to reset.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Rev.: 21

Code: 3ES100_MDU_V6EN Page: 46 of: 60 Date: 06/09/2017

SET PAGE1 TEMP. (default = 0)

It allows the sealing temperature to be changed directly on the main page using the ARROW UP and ARROW DOWN buttons

SET TEMP.END SEAL (default = 0)

1=Latch the temperature at the end of sealing

APPENDIX C1 – PRIORITY SETTING DATA managed directly on the MAIN MENU (see par.5.5.4 parameters pages)

PREHEAT TEMPERATURE (default = 100)

It allows to set pre-heat temperature (we suggest to set 40-50 degree less than the seal temperature).

SEAL TEMPERATURE (default = 150)

It allows to set the seal temperature

INCREASE SEALING (default = 0)

It allow to compensate the decrease of temperature caused by the large of the bag to seal, less than 80% of the active zone (zone in the middle of the sealing band not copper plated)

INCREASE SEALING is the total increase of the sealing temperature in degree.

TECHNICAL NOTE: the increase of temperature happens:

1)In impulse sealing on the down trigger of the seal command

2)In continuos sealing on the up trigger of the pre-heat command when seal command is on.

INCREASE NR (default = 0)

It's the number of sealing necessary to obtain the total increase of sealing temperature INCREASE SEALING

RECOVERY TIME (default = 0)

It's the time in seconds necessary to reset the initial condition of sealing temperature.

THERMOSALD ISX – IPX – INSTALLATION AND USER MANUAL Code: 3ES100_MDU_V6EN Page: 47 of: 60

APPENDIX D - LIST OF ALARMS AND MESSAGES (CAUSES - REMEDIES)

NOTE – To reset any alarm raise the RESET command from the interface and press the **RESET / MODE** button

NOTE – When in the alarm condition the RED LED lights up; the alarm number can be deducted from the green and red LED blinking:

ALARM NO.=NO. OF GREEN LED IMPULSES x 10 + NO. OF RED LED IMPULSES

NOTE – When in the warning condition the YELLOW LED lights up; the warning number can be deducted from the green and red LED blinking:

WARNING NO.=NO. OF GREEN LED IMPULSES x 10 + NO. OF RED LED IMPULSES

NOTE – Any warning is displayed for the second set in the setting data WARN TIME

ALARM	DESCRIPTION	REMEDY
FAULT A	thermoregulator completely OFF plus display completely OFF	Check the power supply; power supply unit faulty; contact the supplier
